

Measuring Guide

Dust Seal

Fork Seal

MEASURE A: corresponds to the fork's rod diameter on which the seal has being designed to work on.

MEASURE B: corresponds to the outer seal diameter measured on its most external fitting protuberances.

This value is very difficult to measure with standard tools (callipers) because of rubber deformation during measurement.

Example: to distinguish from 48S oil seal from a 48W one, we suggest to look for "C" measure difference rather than "B" one.
